

Mohammadkazem Farahbakhsh

Computer Engineering Student · Frontend Developer · Aspiring Full-Stack Engineer

Profile

Computer Engineering student and developer focused on building modern, responsive, and interactive web applications.

Experienced with React, Next.js, TypeScript, Tailwind CSS, and modern component libraries. Currently expanding into backend development with Go, Node.js, PostgreSQL, Redis, Docker, and API design.

Education

B.Sc. in Computer Engineering — Islamic Azad University, Lahijan

Interests and coursework include programming, algorithms, discrete mathematics, operating systems, computer architecture, and software engineering. Preparing for graduate-level studies in Software Engineering.

Technical Skills

Frontend	HTML5, CSS3, JavaScript, TypeScript, React, Next.js, Tailwind CSS, PWA, Framer Motion, shadcn/ui, Base UI, Lucide
Backend	Node.js, Express.js, Go (learning), PostgreSQL, Prisma, Redis, REST APIs, Authentication & Authorization
Tools	Git, GitHub, Docker, npm, Vercel, CLI, Postman
Other	Three.js, WebGL, React Globe GL, Unreal Engine, C++ fundamentals

Projects

Melodia — Personal Full-Stack Web Project

Stack: Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Prisma, Docker, Redis

Exploring modern application architecture, UI/UX, authentication, API integration, database modeling, state management, and production-oriented development.

Ostadbun — Web Application / Team Project

Stack: Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Prisma, REST APIs

Academic platform involving students, professors, universities, majors, and lessons. Work included frontend architecture, administrative interfaces, data management, API integration, authentication flows, and responsive UI.

Personal Portfolio — Modern Personal Portfolio

Stack: Next.js, React, TypeScript, Tailwind CSS, shadcn/ui, Framer Motion, Three.js/WebGL

Responsive portfolio with animated sections, interactive UI, project showcase, skills and About sections, theme support, and interactive visual elements.

Current Learning

- Backend engineering: Go, Node.js, REST APIs, PostgreSQL, Redis, Docker, authentication, backend architecture, and database design.
- Software engineering: data structures and algorithms, discrete mathematics, system design, software architecture, databases, networking, and operating systems.
- Game development: Unreal Engine and interactive 3D/game programming concepts.

Goals & Interests

Become a strong software engineer with full-stack capabilities; deepen backend and system-design skills; build production-quality applications; continue algorithmic problem solving; explore Go seriously for backend development; and expand into game development, computer graphics, and interactive web experiences.

Strengths

- Learning through practical projects and experimentation
- Frontend development and UI implementation
- Modern React/Next.js ecosystem
- Curiosity about how systems work internally

- Continuous iteration and long-term software engineering growth
